

Davina Lydia Pinto

Software Engineer | .NET Developer | Cloud & Integration Engineer | Intelligent Automation Specialist

0430 015 890 • davinapinto@gmail.com • linkedin.com/in/davina-lydia-pinto • github.com/daylinda • Canberra, ACT (Open to Relocation)

PROFESSIONAL SUMMARY

Software Engineer with 4+ years designing, developing, securing, and deploying enterprise software across backend engineering, cloud platforms, intelligent automation, and AI-powered systems. Experienced in architecting scalable .NET applications using ASP.NET Core, Entity Framework Core, REST APIs, OAuth 2.0, JWT Authentication, Docker, and Google Cloud Platform. Proven ability to translate business requirements into secure, maintainable production systems while leading technical architecture decisions and mentoring engineering teams.

CORE COMPETENCIES

Backend Engineering: C#, .NET 6/8, ASP.NET Core, Entity Framework Core, REST API Design, Layered Architecture, DTO Design, Repository Pattern, Dependency Injection, LINQ, OpenAPI (Swagger), JSON, XML

Cloud & DevOps: Google Cloud Platform, Cloud Run, Docker, GitHub Actions, CI/CD, Azure, Jenkins, YAML

Security: OAuth 2.0, JWT Authentication, Google Cloud IAM, Google Secret Manager, Identity-Aware Proxy (IAP), Role-Based Access Control, Secure API Design

Automation: UiPath, REFramework, UiPath Orchestrator, Attended/Unattended Robots

AI Engineering: Google Gemini API, AI-powered Document Processing, Prompt Engineering

Databases: SQL, SQL Server, Entity Framework Core, Firebase, Cloud Firestore

Frontend: TypeScript, JavaScript, React, React Native, HTML, CSS, Bootstrap

Engineering Practices: Agile, Scrum, SOLID, OOP, Technical Architecture, System Design, Code Reviews, CI/CD, Stakeholder Management

PROFESSIONAL EXPERIENCE

Software Engineer

Tailored Accounts • Canberra • November 2024 – Present

- Led technical design and implementation of cloud-native backend services and enterprise automation platforms, owning API architecture, security, deployment, and integration decisions across multiple production systems.
- Mentored an offshore engineering team of two through architecture reviews, solution design, code reviews, and technical guidance.
- Established reusable engineering patterns for backend services, REST APIs, and automation platforms.
- Architected and developed secure .NET 8 REST APIs using ASP.NET Core and Layered Architecture, including endpoint contracts, DTO models, validation pipelines, service/repository layers, dependency injection, and OpenAPI documentation.
- Built asynchronous processing services and resilient API integrations supporting multiple enterprise applications.
- Designed and implemented an AI-powered OCR and document processing platform integrating Google Gemini via secure ASP.NET Core APIs.
- Developed end-to-end workflows receiving uploaded tax documents, orchestrating AI classification, extracting structured business information, and returning validated responses with retry policies, logging, and audit trails.
- Containerised .NET applications with Docker and deployed to Google Cloud Run with GitHub Actions CI/CD across Development, Staging, and Production.
- Secured production services using OAuth 2.0, JWT Bearer Authentication, Google Cloud IAM, Secret Manager, and Identity-Aware Proxy.
- Designed REST API integrations connecting internal finance systems with Xero, Google Gemini, and Google Apps Script.
- Built unattended UiPath robots processing Activity Statements for 70+ client organisations; automated ATO Agent Portal authentication and Xero invoice reconciliation via Node.js middleware, reducing manual effort by ~30%.

Software Developer

BNP Paribas • August 2020 – June 2023

- Led migration of enterprise banking systems from .NET Framework to .NET 6, modernising WCF services into REST APIs and improving application performance by 40% with zero unplanned downtime.
- Developed CRM modules using C#, WPF, MVVM, XML, and REST APIs, working directly with Business Analysts to translate requirements into scalable enterprise software.
- Delivered unit testing, integration testing, production support, environment administration, and software patch management.
- Ran internal workshops on modern .NET development and mentored engineers joining the team.

SELECTED PROJECTS

Intelligent Job Application Platform

UiPath • ASP.NET Core • TypeScript • Firebase • Chrome Extension

Distributed job application platform consisting of a Chrome Extension, ASP.NET Core REST API, Firebase backend, and UiPath automation with REFramework transaction processing, structured exception handling, retry logic, and secure backend communication.

AI-powered Women's Health Platform

React Native • TypeScript • Expo

AI-assisted mobile application supporting PCOS tracking, nutrition, exercise, meal image recognition, and AI-powered calorie estimation.

Cross-platform Budget Management Platform

.NET MAUI • ASP.NET Core • Firebase

Cross-platform budgeting application using .NET MAUI, ASP.NET Core 8, Firebase, Dependency Injection, and Async MVVM.

EDUCATION

Master of Computing — Australian National University • 2023 – 2025

Relevant coursework: Data Mining, Human-Computer Interaction, Web Development, Game Development.

Bachelor of Computer Engineering — Mumbai University • 2016 – 2020
