Canberra, ACT (Open to Relocation)

PROFESSIONAL SUMMARY

Senior Software Engineer with over four years of experience designing, developing, securing, and deploying enterprise software solutions across backend engineering, cloud platforms, intelligent automation, and AI-powered systems.

Experienced in architecting scalable .NET applications using ASP.NET Core, Entity Framework Core, Layered Architecture, REST APIs, OAuth 2.0, JWT Authentication, Docker, and Google Cloud Platform. Proven ability to translate business requirements into secure, maintainable production systems while leading technical architecture decisions and mentoring engineering teams.

Strong background across enterprise banking, financial automation, cloud-native applications, API development, AI integration, and software architecture.

CORE COMPETENCIES

Backend Engineering: C#, .NET Framework, .NET 6, .NET 8, ASP.NET Core, Entity Framework Core, REST API Development, REST API Architecture, Layered Architecture, DTO Design, Repository Pattern, Service Layer, Dependency Injection, LINQ, OpenAPI (Swagger), JSON, XML

Cloud Engineering: Google Cloud Platform, Cloud Run, Docker, GitHub Actions, CI/CD, Azure, Jenkins, YAML

Security: OAuth 2.0, JWT Authentication, Google Cloud IAM, Google Secret Manager, Identity-Aware Proxy (IAP), Secure API Design, Role-Based Access Control, Secrets Management

Automation: UiPath, REFramework, UiPath Orchestrator, Transaction Queues, Attended Robots, Unattended Robots, Exception Handling, Power Automate Desktop

AI Engineering: Google Gemini API, Anthropic API, Claude Code, GitHub Copilot, AI-powered Document Processing, Prompt Engineering

Databases: SQL, SQL Server, Entity Framework Core, Firebase, Cloud Firestore

Frontend: TypeScript, JavaScript, React, React Native, HTML, CSS, Bootstrap

Engineering Practices: Agile, Scrum, SOLID, Object-Oriented Design, Technical Architecture, System Design, Technical Documentation, Code Reviews, Production Support, CI/CD, Stakeholder Management

PROFESSIONAL EXPERIENCE

Software Engineer November 2024 – Present
Tailored Accounts | Canberra

Technical Leadership

- Led the technical design and implementation of cloud-native backend services and enterprise automation platforms, owning API architecture, security, deployment, and integration decisions across multiple production systems.
- Mentored an offshore engineering team of two developers through architecture reviews, solution design, code reviews, and technical guidance.
- Established reusable engineering patterns for backend services, REST APIs, and automation platforms.

Backend Engineering

- Architected and developed secure .NET 8 REST APIs using ASP.NET Core and Layered Architecture.
- Designed endpoint contracts, DTO request/response models, validation pipelines, service layers, repository layers, dependency injection, and OpenAPI documentation.
- Developed reusable business services supporting multiple enterprise applications.
- Built asynchronous processing services and resilient API integrations.

AI Platform Engineering

- Designed and implemented an AI-powered OCR and document processing platform integrating Google Gemini through secure ASP.NET Core APIs.
- Developed end-to-end workflows receiving uploaded tax documents, orchestrating OCR and AI classification, extracting structured business information, and returning validated responses.
- Implemented structured exception handling, retry policies, logging, validation, and audit trails.

Cloud Engineering

- Containerised .NET applications using Docker.
- Deployed production services to Google Cloud Run.
- Implemented GitHub Actions CI/CD pipelines across Development, Staging, and Production.

- Managed cloud configuration and deployment automation.

Security Engineering

- Designed secure authentication and authorization using OAuth 2.0 and JWT Bearer Authentication.
- Protected production services using Google Cloud IAM.
- Managed application secrets using Google Secret Manager.
- Secured backend services using Identity-Aware Proxy (IAP).

Enterprise Integration

Designed REST API integrations connecting internal finance systems with Xero, Google Gemini, and Google Apps Script. Developed reusable integration services supporting resilient enterprise communication.

Intelligent Automation

- Built unattended UiPath robots processing Activity Statements for over 70 client organisations.
- Automated authentication with the ATO Agent Portal.
- Built invoice reconciliation solutions integrating UiPath, Node.js middleware, and Xero APIs.
- Reduced manual processing effort by approximately 30%.

Software Developer

August 2020 – June 2023

BNP Paribas

Enterprise Software Engineering

- Led migration of enterprise banking systems from .NET Framework to .NET 6.
- Modernised WCF services into REST APIs.
- Improved application performance by 40%.
- Delivered production migration with zero unplanned downtime.

Enterprise Application Development

- Developed CRM modules using C#, WPF, MVVM, XML, and REST APIs.
- Worked directly with Business Analysts to translate business requirements into scalable enterprise software.

Production Engineering

- Delivered unit testing, integration testing, production support, environment administration, and software patch management.

Technical Leadership

- Delivered internal workshops on modern .NET development.
- Mentored engineers joining the development team.

SELECTED PROJECTS

Intelligent Job Application Platform

UiPath | ASP.NET Core | TypeScript | Firebase | Chrome Extension

Designed a distributed job application platform consisting of a Chrome Extension, ASP.NET Core REST API, Firebase Backend, and UiPath Automation. Implemented REFramework transaction processing, structured exception handling, retry logic, and secure backend communication.

AI-powered Women's Health Platform

React Native | TypeScript | Expo

Developed an AI-assisted mobile application supporting PCOS tracking, nutrition, exercise, meal image recognition, and AI-powered calorie estimation.

Cross-platform Budget Management Platform

.NET MAUI | ASP.NET Core | Firebase

Developed a cross-platform budgeting application using .NET MAUI, ASP.NET Core 8, Firebase, Dependency Injection, and Async MVVM.

EDUCATION

Master of Computing (High Distinction)

2023 – 2025

Australian National University

Relevant Coursework: Data Mining, Human-Computer Interaction, Web Development, Game Development.

Bachelor of Computer Engineering

2016 – 2020

Mumbai University

PROFESSIONAL ACHIEVEMENTS

- Designed production REST API architecture for enterprise automation platforms.
- Delivered secure cloud-native .NET services deployed to Google Cloud Platform.
- Built AI-powered document processing systems integrating Google Gemini.
- Led technical architecture decisions across backend, cloud, security, and automation.
- Reduced manual processing by approximately 30% through intelligent automation.
- Delivered enterprise software supporting financial services organisations.
