(open to relocation)

PROFILE

Software engineer and automation specialist with 4+ years of experience building production systems across AI integration, RPA automation, cloud APIs, and enterprise backends. Comfortable across the full stack in C#, TypeScript, and Python, with a track record of shipping working solutions quickly under ambiguity. Built AI-powered document processing pipelines with Google Gemini and the Anthropic API, orchestrated UiPath agentic bots with REFramework transaction handling, and deployed microservices to GCP Cloud Run with GitHub Actions CI/CD. Experienced working directly with business analysts and stakeholders to translate requirements into production systems, particularly across financial services. Fast learner who adopts AI tooling — including Claude Code and GitHub Copilot — as a standard part of the engineering workflow, and is keen to extend further into the Microsoft Power Platform.

CORE SKILLS

AI & Agentic Tools	UiPath (REFramework, attended/unattended bots, exception handling, transaction queues), Google Gemini API, Anthropic API, Claude Code, GitHub Copilot, prompt engineering, Power Automate Desktop (concepts)
Languages	C#, TypeScript, JavaScript, Python, PowerShell, SQL, Bash, HTML/CSS
Cloud & DevOps	GCP Cloud Run, Azure (CLI, core concepts), Docker, GitHub Actions, Jenkins, CI/CD, YAML pipeline configuration
Integration & APIs	REST APIs, HTTP/HTTPS web services, JSON, XML, LINQ, microservices, Node.js middleware, Chrome Extension APIs
Data & Databases	SQL, Firebase Realtime Database, Cloud Firestore, structured data pipelines, document classification
Frameworks	.NET 6/8/10, ASP.NET Core, .NET MAUI, WPF/MVVM, WCF, React, React Native, Node.js, Bootstrap, Expo
Practices	Agile/Scrum, SOLID/OOP, TDD, stakeholder collaboration, technical documentation, code review, operational support, WCAG accessibility

EXPERIENCE

Software Engineer | Tailored Accounts | Canberra, ACT

Nov 2024 – Present

- Built and deployed an unattended UiPath bot on a production server that authenticates with the ATO Agent Portal, retrieves activity statement reports across 70+ clients, and classifies each balance as Xero-reconciled, payable, or overpaid via a Google Apps Script transformation layer. Outputs feed a Looker Studio dashboard that auto-refreshes on each run, delivering a live client view in under 30 minutes.
- Built an AI-powered document processing pipeline integrating Google Gemini with a .NET Web API to classify and extract tax documents end-to-end, including structured exception handling, retry logic, and a full audit trail; designed and delivered in close collaboration with internal stakeholders.
- Developed UiPath agentic bots integrated with Xero via a Node.js middleware layer, orchestrating invoice reconciliation workflows using REFramework transaction queues and reducing manual processing effort by approximately 30%.
- Built a Chrome extension in TypeScript to automate session cookie management for internal developer workflows, and developed secure microservices connecting internal finance systems to external platforms across dev, staging, and production environments.
- Containerised applications with Docker, wrote deployment configurations for GCP Cloud Run, and implemented GitHub Actions CI/CD pipelines across multiple environments, applying configuration-as-code patterns.

- Used Claude Code and GitHub Copilot throughout delivery to accelerate development, debug faster, and explore unfamiliar APIs — treating AI tooling as a standard part of the engineering workflow.

Software Developer | BNP Paribas | Mumbai, India

Aug 2020 – Jun 2023

- Led migration from .NET Framework to .NET 6 and converted WCF services to REST APIs, improving system performance by 40% with zero unplanned downtime during cutover.
- Delivered CRM modules across Agile sprints using WPF/MVVM and C#, integrated with Siebel XML data feeds; worked directly with business analysts to translate retail banking requirements into technical designs, consistently delivering ahead of schedule.
- Responsible for unit testing, system integration testing, and post-release production support; administered development environments and managed software patches and upgrades.
- Facilitated internal workshops on modern .NET practices to support team onboarding and maintain code quality standards across the engineering team.

PERSONAL PROJECTS

RPA Job Application Automator - UiPath · ASP.NET Core · TypeScript · Firebase · Chrome Extension

- End-to-end agentic automation: a TypeScript Chrome extension captures job listing data, an ASP.NET Core REST API persists it to Firebase, and a UiPath attended bot orchestrates the submission workflow. Implements REFramework-aligned transaction processing with structured exception handling and retry logic.

Women's Health App - React Native · TypeScript · Anthropic API · Expo

- Cross-platform mobile app for women tracking menstrual cycles, PCOD-related symptoms, nutrition, and activity. Integrates the Anthropic API to analyse meal photos and return real-time calorie breakdowns, with custom React hooks and a shared component library across three feature modules.

Budget Tracker - C# · .NET MAUI · ASP.NET Core 8 · Firebase Realtime DB · TypeScript

- Cross-platform app (Android / iOS / Windows) tracking spending with push notifications. ASP.NET Core 8 REST API backed by Firebase Realtime Database; async MVVM architecture with a DI-wired service layer.

EDUCATION

Master of Computing | Australian National University | Canberra

2023 – 2025

Relevant coursework: Data Mining, Human-Computer Interaction, Web Development, Game Development

Bachelor of Computer Engineering | Mumbai University

2016 – 2020
