PROFESSIONAL SUMMARY

Software Engineer with 4 years of experience building and shipping production systems. Has worked across the stack at multiple companies, covering .NET APIs, cloud deployments on GCP, UiPath automation, and front-end development. Comfortable taking a feature or a problem from design through to production, whether that involves backend services, cloud infrastructure, or automation workflows.

KEY ACHIEVEMENTS

- **Production API security on Google Cloud:** Deployed a containerised ASP.NET Core API to Google Cloud Run with JWT Bearer authentication via Google Cloud service accounts. Swagger is locked to IAM-authorised users only, so production endpoints are not directly accessible outside of authorised identities.
- **Document processing API with layered architecture:** Built an ASP.NET Core API that sits between the UiPath automation layer and an AI classification service. DTO contracts manage the data transfer so the classification logic can be updated without touching the bot. Includes retry policies, exception handling, and a full audit trail across environments.
- **Automation at scale:** Designed and deployed unattended UiPath workflows that handle business-critical document processing at scale across the client base. The bots connect to government-facing systems and external accounting platforms through a secure Node.js middleware layer.
- **Enterprise migration with zero downtime:** Led the migration of a banking CRM from .NET Framework to .NET 6 in a regulated financial services environment. Converted legacy WCF services to REST APIs with no unplanned downtime during cutover.

TECHNICAL SKILLS

Backend: C#, .NET 6/8, ASP.NET Core, Entity Framework Core, REST APIs, WCF, Node.js

Frontend: TypeScript, JavaScript, React, React Native, WPF/MVVM, XAML, HTML, CSS, Bootstrap, Expo

Automation: UiPath (REFramework, attended/unattended robots, transaction queues, exception handling, Orchestrator)

Cloud & DevOps: Google Cloud Platform (Cloud Run, IAM, Secret Manager), Docker, GitHub Actions, CI/CD

Security: OAuth 2.0, JWT Bearer authentication, Google Cloud IAM, role-based access control

Databases: SQL Server, SQL, Firebase Realtime Database, Cloud Firestore

Practices: Agile / Scrum, Git, system design, layered architecture, DTO design, code review, YAML, JSON, XML

PROFESSIONAL EXPERIENCE

Software Engineer | Tailored Accounts | Canberra, ACT

Nov 2024 – Present

- Designed and built a layered ASP.NET Core document processing API with DTO contracts, service and repository layers, dependency injection, and OpenAPI documentation. The API sits between UiPath and an AI classification service so the classification logic can be updated independently of the automation.
- Secured production APIs with JWT Bearer authentication via Google Cloud service accounts and restricted Swagger to IAM-authorised users only.
- Containerised the apps with Docker, deployed to Google Cloud Run, and set up GitHub Actions CI/CD pipelines across development, staging, and production.
- Built and deployed unattended UiPath automation workflows handling document processing at scale, using REFramework transaction queues and structured exception handling.
- Developed a Node.js middleware layer that connects UiPath bots to external accounting platforms and government-facing systems, handling authentication, data transformation, and reconciliation workflows.
- Conducted a security and compliance review across internal applications at Tailored Accounts, identifying risks and delivering a cybersecurity awareness session to the team.
- Built a Looker Studio dashboard that refreshes automatically on each automation run, giving the business a live view of client data without any manual work.

Software Developer | BNP Paribas | Mumbai, India

Aug 2020 – Jun 2023

- Led the migration of an enterprise banking CRM from .NET Framework to .NET 6, converting legacy WCF services to REST APIs with zero unplanned downtime during cutover.
- Delivered CRM modules across Agile sprints using C#, WPF/MVVM, and XML data feeds, working with Business Analysts to translate retail banking requirements into working software.
- Handled unit testing, integration testing, production support, and patch and environment management in a high-availability banking environment.
- Facilitated internal workshops on modern .NET development practices, supporting team onboarding and maintaining code quality standards across the engineering team.

EDUCATION

Master of Computing Australian National University, Canberra	2023 – 2025
Bachelor of Computer Engineering Mumbai University	2016 – 2020
