Professional Summary

Software Engineer specialising in .NET, enterprise automation, and AI-driven workflows. Experienced in building secure REST APIs, orchestrating UiPath RPA solutions, and deploying LLM-powered document processing systems on Google Cloud. Proven track record modernising legacy systems and delivering scalable end-to-end automation solutions.

Skills

Programming & Software Engineering

- C#, .NET Core, .NET Framework, .NET 6/8, JavaScript, React
- Object-Oriented Programming (OOP), SOLID principles
- WPF, WCF, MVVM, RESTful API design and development

Automation, RPA & AI

- UiPath (RPA & APA), workflow orchestration
- AI-driven document processing, summarisation and classification
- LLM integration and model tuning (Google Gemini)

Backend, Data & Integration

- SQL, Oracle Database, Firebase
- API-driven system integration, secure microservices

Cloud, DevOps & Delivery

- Google Cloud Platform
- Docker, Containerised deployments
- GitHub Actions, Jenkins, Git, Jira
- Agile / Scrum methodologies

Technical Experience

Software developer - Tailored Accounts (Australia): July 2024 – Present

- Designed and implemented an AI-powered tax document analysis pipeline performing ingestion, summarisation and base classification using Google Gemini, exposed via a .NET Web API.
- Fine-tuned Gemini models with domain-specific tax data to improve summarisation accuracy and consistency.
- Orchestrated end-to-end automation workflows using UiPath, enabling seamless processing from document upload to structured outputs.
- Containerised and deployed APIs to Google Cloud Run using Docker for scalable, secure execution.
- Developed secure microservices integrating internal systems with ATO platforms to improve operational efficiency.
- Implemented CI/CD pipelines using GitHub Actions to automate builds, testing and deployments.
- Integrated UiPath bots with Xero via custom Node.js services, reducing manual effort by approximately 30%.
- Built a foundational Chrome extension for cookie management and system cleanup to support internal security hygiene.

Software Developer - BNP Paribas (India): August 2020 – June 2023

- Developed and enhanced CRM application modules in an Agile environment using WPF (MVVM pattern), XAML, and C#, integrating WCF services with XML outputs from the Siebel team to deliver stakeholder-driven features.
- Redesigned legacy systems by migrating .NET Framework code to .NET 6 and converting WCF services to REST APIs, improving application speed by 40% and reducing error rates.
- Collaborated with business analysts to gather and refine CRM requirements, accelerating feature delivery by two sprints and improving user satisfaction.
- Facilitated technical training sessions on modern .NET practices, leading to increased team adoption and reduced onboarding time for new developers.

Education

- Masters of Computing - Australian National University (July 2023 – July 2025)
- Bachelors of Computer Engineering - Mumbai University (August 2016 – May 2020)

Projects

Portfolio Website – WebApp

Tech Stack: React, TypeScript, Vite, HTML, CSS, Bootstrap, GitHub Pages

- Actively developing a responsive portfolio using React and TypeScript to showcase software and automation projects.
- Implementing reusable components with a focus on accessibility, performance and clean UI/UX.

Journey through food – Website

Tech Stack: HTML, CSS, JavaScript, Google Cloud, Google Sheets API

- Developed a responsive website to showcase global cuisines, featuring real-time data storage and content updates.
- Integrated Google Cloud and Google Sheets API for seamless data management. Focused on clean UI/UX design and asynchronous data retrieval to enhance the interactive browsing experience

Study Search – Chat App

Tech Stack: Android Studio, Firebase, Google APIs

- Built a secure Android chat application supporting private and group messaging. Implemented OTP-based login, user blocking, profile editing, and multi-format file sharing.
- Prioritised user authentication and data security throughout the communication.
